ErrorLogs - LunchOrder[Mastery]

```
//Setting the parameters
Food burgers = new Food("burger", 1.85, 9, 33,);
Food fries = new Food("fries", 1.3, 11, 36,);
Food salads = new Food("salads", 2, 1, 11, 5);
Food sodas = new Food("soda", 0.95, 9, 33, 1);
```

```
public Food(String item, double price, int fats, int carbs, int fibers) {

    order = price;
    itemNa = item;
    fat = fats;
    fiber = fibers;
    carb = carbs;
}
```

In the main method, I have an error for the parameters I set for the variable "burger" and "fries". I forgot the 5th parameter for the "fibers" as I set it in the food object. I also have an error for the variable soda's. In the main method I have the amount of fats as 9 for soda, but its supposed to be 0.

```
//Setting the parameters
Food burgers = new Food("burger", 1.85, 9, 33, 1);
Food fries = new Food("fries", 1.3, 11, 36, 4);
Food salads = new Food("salads", 2, 1, 11, 5);
Food sodas = new Food("soda", 0.95, 0, 33, 1);
```

Fixed code, added the 5th parameter, and changed the fats parameter from 9 to 0.

NO MORE ERRORS.
